

Job Posting – Network Technician I

Ben Lomand Connect is seeking an individual that possesses considerable knowledge of switching equipment, fiber optic systems, special service circuits and emergency generators as used in the rural telecommunications industry to fill the position of Network Technician I.

Essential Job Functions and Requirements:

1. Installs and tests network devices including channel units, loop termination devices, ONT's, and access gear.
2. Maintains and repairs all layer 1, physical layer of the OSI model, network issues, digital cross connect systems, and wiring for all C.O. equipment.
3. Performs remote maintenance.
4. Monitors all alarm systems daily.
5. Researches new technology, products and software to expand and enhance network.
6. Addresses and assists with customer complaints and troubleshooting as needed.

Education and Experience

High school degree or equivalent plus one to three years of networking or telecommunications experience or equivalent. Any industry standard networking certifications preferred but not required.

Ben Lomand Connect offers a competitive salary and full accompaniment of benefits. Please complete a job application provided by a Ben Lomand office and/or send a résumé with cover letter highlighting your qualifications for this job opportunity to hrdept@benlomand.net. Pre-employment drug testing, IMVR and background check required prior to employment. EOE
